Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

J C HOLMES

SANTA CRUZ COUNTY

NJN WR 1/11/85: Mark Hay called seeking information on how to acquire mineral rights from the State Land Dept. He plans to do some surface mining at the J C Holmes Claims, Santa Cruz County where in the last 18 months he has discovered an area that contains large vanadinite crystals up to 1 inch in size. Once he has a lease he will collect these for sale to dealers and collectors. (Hopefully a legal description will be available after the prospecting permit is acquired. Samples from this location are represented by MM-K629.

NJN WR 1/3/86: John Lucking reported that the J C Holmes (c) vanadinite occurrence is located in T21S R15E Sec 36 NW. The deposit is a quartz filling in a volcanic breccia zone. The collecting area is nearby but not at the drift shown on the Patagonia 7.5 quadrangle. A more detailed description of this occurrence will be published in the March issue of the Mineralogical Record.
